

TIGER 2 ARF BUILDING NOTES

In a previous addendum (GBGA1066ADDN01) we stated that the eyelets mentioned on page 22 of the “Main Gear & Wheel Installation” section were no longer needed. We have added three (3) wheel collars and three (3) sets screws to replace the eyelets. Please perform the steps that follow:

1. Slide one of the 5/32" wheel collars on the nose gear and secure with a 6-32 x1/8" set screw.
2. Next, add the wheel to the gear.
3. Slide another 5/32" wheel collar onto the gear and anchor it with a 3/16" Phillips head grub screw.
4. Repeat these steps for the L&R main gear.
