

DEEP SPACE NINE

STAR TREK™

DEEP SPACE 9 WITH U.S.S. DEFIANT NX-74205 AND CARDASSIAN KELDON-CLASS CRUISER
PLASTIC MODEL KIT

ASSEMBLY INSTRUCTIONS

GENERAL ASSEMBLY: This highly-detailed kit features precision-tooled parts for ease of assembly. Care and patience must be exercised to achieve optimal results. It is recommended that the builder examine the instructions carefully and do a dry test fit of parts before applying glue. You will find this very helpful, as it will allow you to gain a clear understanding of how the parts fit together in order to best plan painting and final assembly.

GLUE: This kit has been injected in clear ABS plastic instead of clear polystyrene. This was done in order to strengthen the parts for handling. ABS requires the use of CA (cyanoacrylate) glue. Standard model cement will not bond kit parts.

SUB-ASSEMBLIES: Note that this kit is intended to be built in sub-assemblies. This makes building the kit far more manageable. It is very important to note that it can be extremely advantageous to apply paint and decals to sub-assemblies before completing final assembly.

DECALS & PAINT: This kit includes extensive water slide decals. These decals are compatible with setting solution which can be applied to conform around surface details. A base coat of paint may be required on clear parts to produce desired look. In addition, some modelers may want to add additional painted detail to their kits. See the diagrams on this box tray for instructions regarding decal placement and optional paint specs. For best results apply dull coat for final finish.
